List of Contents

NUMBER 1

	i	Softstrip® data strip containing the table of contents for this issue
J. Scott Weaver and Charles H. Langmuir	1	Calculation of phase equilibrium in mineral-melt systems
David J. Kirkner and Howard W. Reeves	21	A penalty function method for computing chemical equilibria
E. Azmon and D. Elazar	41	Computer controlled settling tube analyses, calculations, and presentation of granulometric data
J. Verhoef, K. H. Usow, and W. R. Roest	51	A new method for plate reconstructions: the use of gridded data
Roddy V. Amenta	75	An interactive FORTRAN program for cross-correlation of signals on a PC with CGA graphics: an application in marine geoacoustics
Gregory Cole, Scott MacInnes, and James Miller	101	Conversion of contoured topography to digital-terrain data
G. W. Dagger	111	Optical mineralogy using SIMPLIS
Reviews	137	

NUMBER 2

	i	Softstrip® data strip containing the table of contents for this issue
Richard D. LeFever	141	MARKOV: a BASIC program for numerical analysis of sequential data on the microcomputer
D. R. Cohen	153	GOLDCALC—a FORTRAN program for estimating the number and size of gold particles in geological samples
Martin S. Hanna and Ted Chang	163	On graphically representing the confidence region for an unknown rotation in three dimensions
E. Savazzi	195	C programs for displaying shaded three-dimensional objects on a PC
James R. Carr	211	UVKRIG: a FORTRAN-77 program for universal kriging
Hugo Rainier Ballina Lopez	237	FORTRAN program for automatic terrain correction of gravity measurements
M. T. Abasov, I. S. Djafarov, and G. I. Askerov	245	Computer-based system for exploration, optimization, and reserve estimation at the Bakhar field, South Apsheron, Azerbaijan, SSR
COGS Contribution Douglas C. Peters	251	The beginning of a joint effort: an introduction to the COGS computer contributions section
J. H. Trexler Jr. and P. H. Cashman	253	Computer-assisted paleocurrent determination from trough cross-stratification

Short Notes
T. Suresh — 263 Applying corrections to digitized data while digitizing magnetic chart

R. Benito Garcia and J. Martinez Frias — 265 BITERCLA: GW-BASIC program to plot classification diagrams

Reviews — 273

NUMBER 3

i Softstrip® data strip containing the table of contents for this issue

I. V. Radhakrishna Murthy, P. Rama Rao, and S. Jagannadha Rao — 277 The density difference and generalized programs for two- and three-dimensional gravity modeling

James R. Carr — 289 CORSPOND: a portable FORTRAN-77 program for correspondence analysis

A. Mogessie, R. Tessadri, and C. B. Veltman — 309 EMP-AMPH—a Hypercard program to determine the name of an amphibole from electron microprobe analysis according to the International Mineralogical Association scheme*

Vassiliki J. Kollias and Anastasios G. Malliris — 331 A prototype multidatabase system for soil databases

Isaac M. Marobhe — 341 A versatile Turbo-Pascal program for optimization of magnetic anomalies caused by two-dimensional dike, prism, or slope models

Short Notes
Adam Walanus — 367 Running phase analysis—a method for cycle searching in long series

R. J. Cumbest — 371 AMPHAX: a FORTRAN program for calculating the lower hemisphere stereographic projections of the crystallographic axes of clinoamphibole from universal stage measurements

Clayton Deutsch — 379 A FORTRAN 77 subroutine for determining the fractional area of rectangular grid blocks within a polygon

David Mainprice — 385 A FORTRAN program to calculate seismic anisotropy from the lattice preferred orientation of minerals

NUMBER 4

i Softstrip® data strip containing the table of contents for this issue

J. Jaime Gómez-Hernández and R. Mohan Srivastava — 395 ISIM3D: an ANSI-C three-dimensional multiple indicator conditional simulation program

Leonard Robert Gardner and Ian Lerche — 441 Simulation of sulfur diagenesis in anoxic marine sediments using Rickard kinetics for FeS and FeS_2 formation

G. Roullet, J. Raphanaud, and J. J. Legendre — 461 A user-friendly microcomputer program for modeling convex polyhedra

Antoinette Sprenger and Warner G. ten Kate — 517 A graphical software system to present stratigraphic information of surveyed sections

I. V. Radhakrishna Murthy and S. K. G. Krishnamacharyulu — 539 — Automatic inversion of gravity anomalies of faults

Harald Hagen and Else-Ragnhild Neumann — 549 — Modeling of trace-element distribution in magma chambers using open-system models

A. Tuğrul Başokur — 587 — Microcomputer program for the direct interpretation of resistivity sounding data

NUMBER 5

i — Softstrip® data strip containing the table of contents for this issue

G. Gottardi and E. Mesini — 603 — FEGO: a two-phase finite-element program for miscible recovery processes in porous media

J. Steppeler — 645 — FE2DY: a finite element FORTRAN program for the solution of the shallow-water equations with energy conservation

Derek R. Peddle and Steven E. Franklin — 669 — GEDEMON: a FORTRAN-77 program for restoration and derivative processing of digital image data

S. Mishra, J. C. Parker, and J. L. Zhu — 697 — An algorithm for generating spatially autocorrelated unsaturated flow properties

James R. Carr and Donald E. Myers — 705 — Efficiency of different equation solvers in cokriging

Mark B. Lindberg — 717 — FISHER: a Turbo Pascal unit for optimal partitions

Ute Christina Herzfeld — 733 — Cova functions for unevenly and noncorrespondingly spaced processes

NUMBER 6

ARTIFICIAL INTELLIGENCE APPLICATIONS IN GEOSCIENCE

Peter F. Fisher — 751 — Introduction

Peter F. Fisher — 753 — A primer of geographic search using artificial intelligence

Terence R. Smith, Cixiang Zhan, and Peng Gao — 777 — A knowledge-based, two-step procedure for extracting channel networks from noisy DEM data

Richard B. Lammers and Lawrence E. Band — 787 — Automating object representation of drainage basins

Marc P. Armstrong and David A. Bennett — 811 — A bit-mapped classifier for groundwater quality assessment

Michael N. DeMers — 833 — SEDRULE: a rule-based system for interpreting some major sedimentary environments

C. Gustav Lundberg and Gunilla Holm — 847 — Challenges and promises of integrating knowledge engineering and qualitative methods

Vincent B. Robinson — 857 — Interactive machine acquisition of a fuzzy spatial relation

Niles D. Ritter and George F. Hepner 873 Application of an artificial neural network to land-cover classification of Thematic Mapper imagery

NUMBER 7

Peter S. Dahl 881 A PC- and Lotus-based data acquisition/reduction system for an ICP spectrometer

D. D. Sarma and J. B. Selvaraj 897 Two-dimensional orthonormal trend surfaces for prospecting

Andrea Zerilli and Robert J. Bisdorf 911 A BASIC program to transform continuous polar dipole–dipole resistivity soundings to half-Schlumberger soundings

C. H. B. Leitch and S. J. Day 925 NEWGRES: a Turbo Pascal program to solve a modified version of Gresens' hydrothermal alteration equation

P. F. M. van Gaans and S. P. Vriend 933 Multiple linear regression with correlations among the predictor variables. Theory and computer algorithm RIDGE (FORTRAN 77)

John W. Gephart 953 FMSI: a FORTRAN program for inverting fault/slickenside and earthquake focal mechanism data to obtain the regional stress tensor

I. V. Radhakrishna Murthy and S. K. G. Krishnamacharyulu 991 A FORTRAN-77 program to invert gravity anomalies of sheet-like bodies

Steven E. Franklin 1003 Topographic context of satellite spectral response

COGS Contribution
Lawrence S. Jones 1011 Correction of structural tilting and statistical analysis of directional data using PCTILT

NUMBER 8

Tianshan Zhang and Adam Schultz 1027 EXORCISE—an algorithm for detection of spurious values and prediction of missing data

M. T. Pareschi, M. Pompilio, and F. Innocenti 1067 Automated evaluation of volumetric grain-size distribution from thin-section images

P. V. Sathe and Shubha Sathyendranath 1085 FORTRAN programs for computation of optical properties of the sea from radiation data collected by in situ spectrometers

V. M. Arellano, E. Iglesias, and J. Arellano 1105 ANAPPRES V2.0: a computerized expert system for well-test analysis

Paul E. Holm 1117 Complex petrogenetic modeling using spreadsheet software

Václav Bezvoda, Josef Ježek, and Karel Segeth 1123 FREDPACK—a program package for linear filtering in the frequency domain

Neil A. Wells 1155 Comparing sets of circular orientations by modified chi-squared testing

Philippa Young and Geoff Wadge 1171 FLOWFRONT: simulation of a lava flow

Dilip Saha and Tapan Chakraborty 1193 TILTVEC: a FORTRAN-77 program for the tilt correction of paleocurrent data with resolution of incongruities

Alex Woronow 1209 Methods for quantifying, statistically testing, and graphically displaying shifts in compositional abundances across data suites

Short Note
J. Thioulouse 1235 MacMul and GraphMu: two Macintosh programs for the display and analysis of multivariate data

Reviews 1241
